

Graduate Students of Anthropology Association Presents

The National Science Foundation: Evolving Research Under the Looking Glass

Dr. Carolyn L. Ehardt

Professor, Department of
Anthropology, University of Texas at
San Antonio

*[And Recently/Formerly: Program
Director, Biological Anthropology
Program, National Science
Foundation]*

In these times of heightened Congressional oversight, budgetary restrictions, emphasized accountability and transparency, and open access, NSF's funding mission has become more dynamic. Characteristics of evolving approaches to evaluating research proposals and structuring of funding have potential to impact NSF's support of research across the sciences, and with particular relevance to the social and behavioral sciences. Building on a recent multi-year appointment as an NSF program director, an 'insider's' insights are offered regarding current events and the agency's responses. What are the pressures currently impacting NSF, and how will NSF's responses to these structure our engagement in efforts to fund research with Federal dollars?

**6 PM Thursday November 13th
Hitchcock 035
Reception to follow at 7 PM
in Smith Lab 4012**
